

Dokuwiki Plugins Used

There are a number of plugins installed, that allow for certain non-standard features. To get an idea of how to use them, see the section [Plugins](#) below. There are, however also other not so well-known markup tags, that may be of use.

Columns

By default, there is a means to align contents in columns, but not in a table. Here is an example for two columns:

```
<WRAP group>
  <WRAP half column>
    ===== Head Line =====
    Indention for Box
  </WRAP>
  <WRAP half column>
    ===== Another Head Line =====
    Another Box
    Out of the Box
  </WRAP>
</WRAP>
```

This will result in this presentation:

Head Line	Another Head Line
Indention for Box	Another Box
	Out of the Box

As you can see, it is not newspaper-like, where text wraps at the lower window into the next column.

Plugins

folded

This allows you to create a hidden section of the text, that can be unfolded.

```
++++ (click to expand) |
This is hidden by default
++++
```

[\(click to expand\)](#)

This is hidden by default

RefNotes

This allows you to create a footnote.

This text is footnoted with [(this footnote)].

This text is footnoted with ¹⁾.
