

Dokuwiki Plugins Used

There are a number of plugins installed, that allow for certain non-standard features. To get an idea of how to use them, see the section [Plugins](#) below. There are, however also other not so well-known markup tags, that may be of use.

Columns

By default, there is a means to align contents in columns, but not in a table. Here is an example for two columns:

```
<WRAP group>
  <WRAP half column>
    ===== Head Line =====
    Indention for Box
  </WRAP>
  <WRAP half column>
    ===== Another Head Line =====
    Another Box
    Out of the Box
  </WRAP>
</WRAP>
```

This will result in this presentation:

Head Line

Another Head Line

Indention for Box

Another Box

Out of the Box

As you can see, it is not newspaper-like, where text wraps at the lower window into the next column.

Non-Breaking Spaces

There are instances where you want a space to be non-wrapping (e.g. to get a better layout in a table). Use `\_` to create one.

Plugins

Anchor

Allows for setting an anchor (link-target) aside from the already existing ones that are also used in the table of contents.

```
{{anchor:anchor_target_name:this is the visible text}}
```

this is the visible text

This allows you to target the anchor, e.g. [anchor_target_name](#)

Wrap Plugin

Is used for Info-Boxes.

```
<block classes left info>
**My little Heading**
  * Some
  * Stuff
</block>
```

My little Heading

- Some
- Stuff

folded

This allows you to create a hidden section of the text, that can be unfolded.

```
++++ (click to expand) |
This is hidden by default
++++
```

[\(click to expand\)](#)

This is hidden by default

RefNotes

This allows you to create a footnote.

```
This text is footnoted with[(this footnote)].
```

This text is footnoted with¹⁾.

include

This plugin allows you to include another article. This can be helpful for recurring sections or footers.

```
{{page>.hidden_example}}
```

This part comes from an entirely other article.

2022-04-21-19-20 · 7saturn

This can be influenced with the switches `&noeditbutton` and `&nofooter`. The former turns of the edit button for users that can edit be article. The latter turns off the information about the included section.

```
{{page>.hidden_example&noeditbutton&nofooter}}
```

This part comes from an entirely other article.

MathJax

Allows for using LaTeX notation inside the Dokuwiki article.

```
$a^2 + b^2 = c^2$
```

$a^2 + b^2 = c^2$
