

# EF 1 Cheats

EF 1 features a single-player campaign, which also allows for the use of certain cheat codes. These cheats work *only* in single player (no, not even if you only add bots in multiplayer). If you enter them in the multiplayer, they go out as chat messages, which probably causes corresponding reactions by the other players... The cheats can only be used if you activate them. Either you already have `sv_cheats 1` in your single player config, or you enter it into the console. Then the following codes will work:
