

Armada 1 Mining Stations

The mining stations of the game *Star Trek: Armada* have the role of granting access to collected Dilitium to all players. [Mining Freighters](#) collect it from Dilithium Moons and transport it to the nearest mining station of the player. This makes the mining stations very often necessarily placed outside of a player's starting base and therefore making them an easy target, as they do not possess any own defenses aside from their shields. A freshly built mining station comes already with one freighter. Another two are required to efficiently mine a moon. Depending on the relative positioning of moon and station even more may be required.

Depiction	Name
	Processing Node
	Mining Station
	Dilithium Refinery
	Mining Facility
